

Our porcine thyroid glands come from Procepts' proprietary high welfare farms in the United Kingdom, where the pigs are raised without the use of growth-promoting hormones, routine antibiotics or pesticides. Our pigs are born outdoors and reared on natural grass pastures, before being brought into large straw-filled barns. Throughout their lives they are free to roam, socialise and express their natural rooting behaviours. After harvesting, the thyroid glands are then freeze-dried and further processed by low temperature methods to carefully preserve their raw nutritional value.
