

Our bovine adrenal cortex comes from Procepts' proprietary farm sources in Europe. Our grass-fed cattle are reared as nature intended, without the use of growth-promoting hormones or antibiotics. For most of the year they are free to range on natural grass pastures and whilst protected indoors during the winter months, they are fed naturally fermented grass (silage). The whole adrenal glands are collected by EU approved abattoirs, before careful removal of the adrenal medulla. The adrenal cortex is then freeze-dried and processed at low temperatures to carefully preserve its raw nutritional value.
